PROGRAM OVERVIEW

The MIT BoSTEM Scholars program is a new summer opportunity benefiting select sophomore and juniors from the Greater Boston who perform strongly in STEM fields (Science, Technology, Engineering, and Mathematics). Preferred participants have a strong desire to positively impact communities through STEM. Located on MIT’s campus, students who attend this program will experience college-level rigor through STEM-focused projects and gain exposure to careers in STEM fields through special workshops, panels, and field trips. Additionally, participation comes with a weekly stipend.

WHAT WE OFFER

Our curriculum aims to improve science literacy. Every two weeks of BoSTEM will have a set theme (Biochemistry, Computer Science, and Physics), totaling in six weeks. Lessons will be accompanied with labs and hands-on activities, to facilitate immersion. Outside of daily lessons, BoSTEM will also host seminars every Saturday featuring job shadowing opportunities, alumni panels, college essay prep, and professional development opportunities. We aim to give students the grounds to develop leadership skills for science-centered innovation.

APPLY NOW!

All rising sophomores and juniors interested in STEM should apply. Underserved and underrepresented students are strongly encouraged to apply.

Students will be admitted on a rolling basis. Go to bostem.mit.edu/application to submit your application by April 20th at 11:59PM!

Program Dates: July 2nd – August 10th
